

AI Is Entering Community Banks. Govern It.

The AI Operating System for Regulated Finance.

Confidence

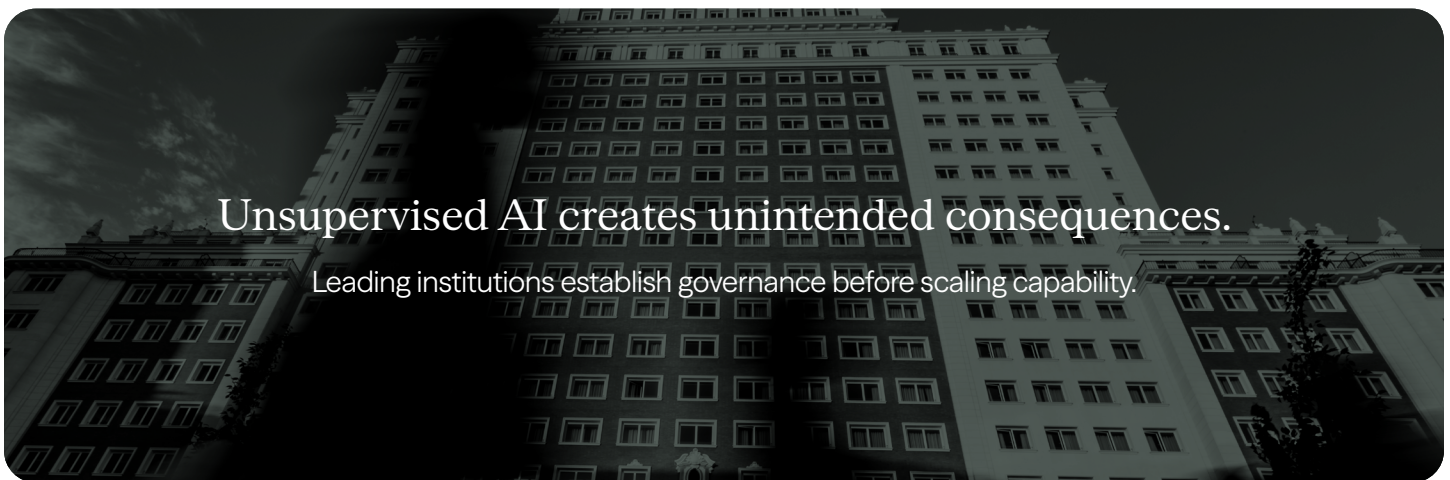

Deploy advanced capability within examiner-aligned supervisory frameworks

Cohesion

Link core platforms, lending, compliance, and operations through one controlled layer

Control

Keep proprietary bank data contained under board-defined oversight

Unsupervised AI creates unintended consequences.

Leading institutions establish governance before scaling capability.

Safety & Governance

- Board-defensible supervision model
- Full activity traceability
- Built-in compliance enforcement
- No external data exposure

Future-proof by Design

- Regulatable workflow AI agents
- Continuous platform evolution
- Core and CRM integration
- Scales with growth

Competitive Edge

- Expand use without expanding risk
- Reduce supervisory variance
- Standardize execution quality
- Modernize safely

The Problem

Most AI tools operate beyond internal visibility. That creates supervision gaps, audit blind spots, and regulatory exposure. The real danger is unmanaged use. Unsupervised AI scales exposure as fast as it scales capability.

The Difference

Verapath is a deployable platform purpose-built for regulated finance. It installs governance architecture inside your environment. Intelligence becomes a governed operating discipline rather than an unmanaged disjointed toolset.

Intelligence in regulated finance must be governed to be trusted.

What system controls AI inside your community bank?
